# SKIN CARE STEPS

## MAKE-UP REMOVAL AND CLEANSING

the most important step as only a complexion without excess sebum, impurities, or make-up residue is able to absorb the nourishing ingredients of skincare

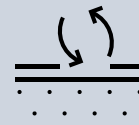

## TONING

restoring skin to its proper pH protects from harmful external elements and the development of damaging pathogens and supports the work of skincare products

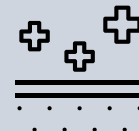

## CARE

moisturises, nourishes, rejuvenates, soothes, minimises blackhead and wrinkle formation, makes skin more supple, firm, and radiant

## EXFOLIATION

removes dead skin cells, prevents clogged pores, smooths skin, brightens and evens colour, as well as increases the wear of make-up

## DIET SUPPLEMENTATION

use of nutricosmetics improves the appearance from the inside out by providing the body with the necessary nutrients that have a direct impact on skin issues

The complexion shows signs of ageing as early as age 25-30, when the components responsible for the skin's firmness and density slowly begin to fade. That's why it is worth starting anti-wrinkle treatment as early as possible in order to win the race against time.

This younger generation is often called the head down generation due to the position in which they spend a good portion of their time. The constant use of mobile phones, tablets, and laptops is the reason behind their poor posture and strain to their necks. As a result, deep furrows and unsightly wrinkles can appear on the neck much earlier than usual. FONTAINAVIE firming serum was created to eliminate them and prevent their formation.
